Dear Valued Customer:

One of the biggest pushes in emissions regulations takes effect this year with the introduction of Tier 4 Final for 175- to 750-horsepower machinery. Compliance for 76- to 174-horsepower equipment begins in 2015. These requirements mean that NOx and soot emissions will be near-zero for new machines, making them the cleanest ever.

We're aligned with excellent manufacturers, such as Komatsu, who have worked hard to meet the evermore stringent requirements that each new tier level has brought. They've met the requirements in innovative ways that, in addition to reducing emissions, often produce machines that are more productive and efficient and improve your bottom line.

In order for that to continue during your equipment's lifetime, proper maintenance is essential. Komatsu and Clairemont Equipment Company's innovation shines in this area too, with the introduction of the Komatsu CARE program, which began in conjunction with Tier 4 Interim models. The program provides complimentary scheduled maintenance for the first three years or 2,000 hours, whichever comes first. Komatsu recently completed the 10,000th service under Komatsu CARE, which you can read about in this issue of your *Pushing Ahead* magazine.

We're proud of our contribution to that impressive number. Our service departments track Komatsu Tier 4 Interim machines in an effort to proactively respond to scheduled service intervals. Our trained technicians perform work at times and locations convenient for you, which maximizes your uptime and reduces your owning and operating costs.

World-class products backed by world-class service are what you expect from an equipment dealer. We're committed to delivering on both counts.

As always, if we can do anything for you, please call or stop by one of our locations.

Sincerely,
CLAIREMONT EQUIPMENT COMPANY

CONEXPO 2014

Construction industry event will showcase innovative new products and technology

“If it’s new, it’s here” is the theme of CONEXPO-CON/AGG 2014, and by all indications, there will be plenty of new products, educational opportunities and amenities at the event. Held every three years, CONEXPO 2014 is scheduled for March 4-8 at the Las Vegas Convention Center.

Billed as the largest construction industry event of its kind, CONEXPO is expected to draw in more than 130,000 visitors and 2,400 exhibitors in the asphalt, aggregates, concrete, earthmoving, lifting, mining and utilities sectors, among others. Show personnel designed CONEXPO 2014 with better-defined product concentration areas to promote more efficient and productive use of attendees’ time.

“The goal, as with all our planning, is to provide the best trade show value and create

the most return on investment for attendees and exhibitors to connect with the people and companies they want to see,” said Megan Tanel, Show Director and Vice President Exhibitions and Events for the Associated Equipment Manufacturers (AEM), which is a lead sponsor of CONEXPO. “These moves will definitely make a positive difference for 2014; attendees can spend less time searching for what they need and spend more time with exhibitors doing business on the show floor.”

New for 2014 is a Platinum Lot where asphalt production/paving, aggregate processing and drilling equipment will be showcased. Located across from the South Hall on Swenson Drive, it will have both indoor and outdoor exhibits, the primary registration area, a full-service restaurant and one of two shuttle stops.

A Demolition & Recycling Exhibits Pavilion is also being rolled out for the first time. Sponsored by the Construction Materials Recycling Association, attendees will find products specific to construction and demolition recyclers and demolition contractors.

“Recycling is an important facet of our industries; more demolition contractors are attending the show, and this pavilion is one way CMRA serves the industry needs,” said Tanel.

Attendees can use an enhanced internal shuttle system to easily get from one show area to another, for example from one of the outside lots where lifting equipment such as cranes can be found, to the North or Central halls where earthmoving machinery will be located.

Thousands attend CONEXPO every three years as it’s considered the premier construction industry event. The show returns to the Las Vegas Convention Center March 4-8.

New products, such as Komatsu's innovative D61i-23 *intelligent Machine Control* dozers, will dominate CONEXPO's landscape. The show will have products grouped by categories, including earthmoving, paving, demolition/recycling and aggregate processing along with many others.

intelligent Machine Control

Komatsu will feature its *intelligent Machine Control* dozers that provide automated grading, from rough cut to finish, through integrated and factory-installed 3D machine control technology. Personnel will be on hand to answer questions, including members of Komatsu's *intelligent Machine Control* Technology Division, which helps customers implement technology into their operations. Also, new Tier 4 Final products will be prominently featured in the 30,000-square-foot Display Area, located in the North Hall, Booth #10016.

Visitors can check out other Komatsu technology such as its KOMTRAX remote machine monitoring system, including its mobile app, which provides users valuable equipment data from a secure website. It will also showcase parts and service capabilities like Komatsu CARE, a complimentary scheduled maintenance program for new Tier 4 Interim and Final machines.

Visitors can also browse the store where apparel, die-cast models and other logoed items will be available.

Projects, people recognized

During the show, attendees will see a CONEXPO campaign focused on raising awareness of the construction industry's accomplishments. The campaign publicizes the positive benefits of construction projects and shows how they can elevate the nation's quality of life. Prior to the event, CONEXPO is inviting those in the construction industry to submit projects that illustrate construction's contributions. Fifty will be chosen and given special recognition.

"CONEXPO-CON/AGG 2014 is the global gathering place in North America every three years for the construction and construction materials industries. It provides an ideal context for the culminating recognition event that will focus on the people of the construction industry and their significant contributions to our modern way of life," said Glen Tellock, CONEXPO Chair.

Recognition will also be given to "young leaders" in construction during a special event on March 5. Those under 40 are encouraged to participate and share ideas that will contribute to the future of the industry.

Continued . . .

CONEXPO-CON/AGG 2014: "If it's new, it's here"

... continued

Educational seminars

Educational opportunities designed to help businesses increase productivity and efficiency are on the docket from March 4-7. Led by industry professionals, these 90-minute presentations cover subjects such as aggregates, asphalt, concrete, cranes, earthmoving, equipment management, recycling and more. Continuing education units are available as are DVDs of the sessions.

Komatsu personnel will be available throughout the show to explain features of products and the technology and engineering behind them.

Komatsu's CONEXPO display will highlight new products, parts and service capabilities and technology along with areas reserved for fun and games and a company store.

As in the past, CONEXPO is co-located with the International Fluid Power Expo, an exposition and technical conference dedicated to the integration of fluid power with other technologies for power transmission and motion control applications. More than 400 exhibitors are expected to participate in IFPE, which also has educational opportunities, including college-level courses in hydraulics and pneumatics.

Its theme is "Where all the solutions come together, and connections are made." An International Fluid Power Summit, with leaders from associations around the world will also be held.

"Attendees will find focused industry education, with the latest techniques and information, that they need to run their businesses most efficiently," said Melissa Magestro, IFPE Show Director and AEM Senior Director Exhibitions. "The opportunity to share experiences and ideas with industry peers adds another dimension to the show experience."

Online show preparation

Preparing for the show can be done by visiting its website at www.conexpoconagg.com. The site provides a list of exhibitors and their location via a floor plan of the Convention Center, educational seminar topics, registration and hotel information, meeting information and an agenda planner. You can also sign up to receive e-mail alerts about CONEXPO. An enhanced internal show transportation system with a show-specific mobile app will also be available.

As in the past, CONEXPO-CON/AGG is sponsored by several industry groups with which attendees are affiliated, including the American Concrete Pavement Association, American Road & Transportation Builders Association, The Associated General Contractors of America and Construction & Demolition Recycling Association.

"Attendees will find the newest products and technologies and technical experts ready to discuss product features and applications," said Tanel. "In the space of a few days, in one place, visitors can examine and compare the best of what our industries have to offer." ■

STRONG OPTIONS

Find out how the new Komatsu PC170LC-10 excavator was designed to provide greater lift capacity

Whether you prefer a lighter, more mobile unit or the heavier piece with added lift capacity, Komatsu's new PC170LC-10 excavator can provide exactly what you need.

The new PC170LC-10 is available with two counterweight options, both of which are heavier and provide added lift capacity compared to the counterweight on the PC160LC-8 model that it replaces. The heavy counterweight option is 1,389 pounds heavier with 15-percent more lift capacity, and the lighter option adds 309 pounds and 5-percent more lift.

"Making the choice really depends on the user's preferences and applications," said Rob Orłowski, Product Manager, Excavators. "An advantage of choosing the lighter counterweight is mobility. In that configuration, the PC170LC-10 can be hauled with a bucket on a 40,000-pound tag-along trailer. That's beneficial to contractors who rely on a powerful excavator in a small package for applications such as residential or non-residential construction, while customers looking for still more lifting power can find it in the PC170LC-10 equipped with the heavy counterweight."

More fuel efficient

The PC170LC-10 has the same horsepower as its predecessor, but it is up to 10-percent more fuel efficient, depending on the application and conditions. Efficiency comes in part from a variable-flow turbocharger that provides optimal airflow under all speeds and load conditions. It also has a Komatsu Diesel Oxidation Catalyst (KDOC) that does not have a scheduled replacement interval as would be required for a unit with a diesel particulate filter.

"With the KDOC there is no active regeneration required; it's 100-percent passive," said Orłowski.

"No particulate filter equates to less maintenance over the life of the excavator. Of course, because it's a Tier 4 Interim machine, Komatsu covers the scheduled maintenance for the first three years or 2,000 hours through the Komatsu CARE program."

Orłowski said the closed-centered hydraulics and harmony of systems give the PC170LC-10 the smooth feel and control that makes Komatsu excavators famous.

"The PC170LC-10 offers more capability at a lower cost, which is what every contractor wants," said Orłowski. "The machine offers a solution to customers with a variety of needs." ■

Rob Orłowski,
Product Manager,
Excavators

* Includes heavy-counterweight bucket, thumb and coupler combo

Brief Specs on the Komatsu PC170LC-10

Model	Net Hp	Operating Weight	Bucket Capacity
PC170LC-10	115 hp	38,100-41,600* lbs.	0.48-1.24 cu yds.

Komatsu's new PC170LC-10 comes with two counterweight options, both of which provide greater lift capacity compared to the previous PC160LC-8, and the PC170LC-10 is up to 10-percent more fuel efficient.

WA500-7

From Komatsu - The Loader Experts

The WA500-7 Tier 4 Interim Wheel Loader is a class-leading performer in the aggregate industry with improvements in production, fuel efficiency, operator comfort and serviceability.

- Large-capacity torque converter with lock-up delivers power, speed and efficiency.
- New operator's cab offers improved visibility and ergonomics.
- Efficient Tier 4 Interim engine provides up to a 7% reduction in fuel consumption.
- Komatsu CARE provides complimentary Tier 4 maintenance, including Komatsu Diesel Particulate Filter exchange. Contact your Komatsu distributor for details.

MORE NEW PRODUCTS

FEWER PASSES

New WA500-7 Yard Loader Arrangement with specially designed buckets increase capacity, productivity

Whether loading trucks, stockpiling or charging hoppers, you want to move material as quickly as possible. Komatsu designed its new WA500-7 Yard Loader Arrangement with specific features that provide increased productivity for applications involving re-handled or loose material.

“Right away, users notice the larger, flat-floor buckets that keep more material inside. These buckets also significantly increase capacity and decrease the number of passes needed to load 24-ton and 26-ton on-highway trucks,” said Rob McMahon, Product Manager-Wheel Loaders, noting that both 9.1- and 9.8-cubic-yard buckets are available. “These buckets offer several other advantages as well, such as reduced abrasion wear of the floor, less force to penetrate a pile and a wear package that’s lightweight and highly effective.”

Komatsu also added a larger-diameter bucket cylinder for increased bucket forces and additional counterweight for better stability and tipping loads.

“The counterweight’s unique shape provides more ground clearance for stockpiling materials, which is a distinct advantage over competitive machines,” said McMahon. “Other standout features include 29-inch rims and low-profile tires for increased stability; a brake cooling system (front and rear), which maximizes brake life in extended-carry and high-speed applications; and full rear fenders for enhanced protection from debris and thrown material.”

The WA500-7 Yard Loader Arrangement features a Tier 4 Interim engine and is

backed by Komatsu CARE, which provides complimentary scheduled maintenance for the first three years or 2,000 hours, whichever comes first.

“The WA500-7 Yard Loader Arrangement has many of the same great features as our base WA500-7, and it offers even greater productivity,” said McMahon. “I encourage anyone who wants that combination to try one in their construction and/or quarry operations.” ■

Rob McMahon,
Product
Manager-Wheel
Loaders

Brief Specs on the WA500-7 Yard Loader Arrangement

Model	Net Horsepower	Operating Weight	Bucket Capacity
WA500-7 Yard Loader	353 hp	79,162-79,630 lbs.	8.2-9.8 cu. yd.

Komatsu’s new WA500-7 Yard Loader Arrangement features larger, flat-floor buckets that increase capacity and productivity for applications involving re-handled or loose material. It’s designed to load 24-ton to 26-ton on-highway trucks in fewer passes.

KOMATSU HYBRID EXCAVATOR

Fast and fuel efficient, in the right application, the HB215LC-1 offers unmatched performance

In late 2009, Komatsu introduced the Hybrid PC200LC-8, the first hybrid hydraulic excavator in North America. The second-generation HB215LC-1 remains the only hybrid excavator in the popular 25-ton class size. Today, however, it's not the uniqueness or novelty that sets the unit apart, but the performance.

"People generally associate a hybrid with fuel savings – and the HB215LC-1 is definitely fuel-efficient," said Komatsu

Excavator Product Manager Rob Orłowski. "On average, it uses 25-percent less fuel than the Komatsu PC200LC-8, a similar-size, traditional excavator. In the perfect application (light digging with lots of swinging), we've had reports of fuel-savings much greater than 25 percent.

"But what surprises equipment operators most is the machine's speed," he added. "The swing motor in the hybrid is exclusively dedicated to the swing function, which makes it faster and more productive."

Other benefits include:

- Quiet, inside and outside the cab;
- Better company image among the general public and many governmental entities;
- Komatsu engine, hydraulics and hybrid technology work together for maximum performance.

"Of course, the HB215 is not the ideal machine for all applications," Orłowski noted. "For example, if you're using a hammer (although there is a service valve to power hydraulic attachments) or performing deep, heavy work with limited swing involved, this machine may not be the perfect fit. But, in a swing-heavy application such as truck loading, it's tough to beat the fuel-savings and speed advantages of the HB215."

The HB215LC-1 comes with a five-year, 7,000-hour warranty on hybrid powertrain components. If you're considering purchasing a hybrid, now is a good opportunity as Komatsu Financial is offering special financing on the HB215 for a limited time. ■

Brief specs on the Hybrid HB215LC-1 excavator

Operating Weight	Power	Bucket Capacity
48,175 lbs.	139 hp	1/57 cu. yd.

The Komatsu HB215 hybrid excavator is 25-percent more fuel efficient than the PC200LC-8, and operators report the swing speed is faster than the traditional model.

HYBRID EXCAVATOR

From Komatsu - The Green Experts

Komatsu continues to strengthen its innovation leadership with the HB215LC-1. Komatsu hybrid excavators have accumulated more than 1 million operating hours in the field, proving their reliability, along with fuel and emissions savings.

- With every swing, the HB215LC-1 regenerates energy – yielding an average fuel savings of 25% with an equivalent 25% fewer CO₂ emissions.
- Hybrid powertrain components are backed by a 5-year/7,000-hour warranty.

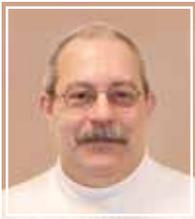

KOMATSU®

www.komatsuamerica.com

EQUIPPED FOR ENERGY PRODUCTION

PC360LC-10 Pipeline Arrangement handles heavy-duty applications such as oil, gas pipelining

Kurt Moncini,
Product Manager
Excavators

Growth in the oil and gas industry has created a unique need for specialty equipment that can handle rugged terrain, trenching and heavy pipe. Specially-equipped Komatsu excavators perform well in those situations, including the popular PC360LC-10 Pipeline Arrangement. Special features that make this a pipeline machine include: anti-drift/anti-burst valves to provide optimum precision when working with heavy loads; single grouser tracks; and heavy-duty under guards.

Pipe sections are often heavy and the excavators have to hold the load for an extended period of time. These units offer an HKX anti-drift/burst valve package that provides superior

load-holding capabilities, including minimal pipe movement under load.

“Excavators are often called on to perform the role of a side boom to hold pipe sections in place during welding,” said Kurt Moncini, Product Manager Excavators. “Maintaining precise pipe position is critical, and the anti-drift valves play an important role in the process.”

“If a hose or hydraulic tube fails, boom and arm anti-burst valves help protect against uncontrolled load lowering, ensuring compliance with hose burst requirements,” added Moncini. “This is especially important when loads are lifted in close proximity to workers and welders.”

Several other options are also available, including a wide range of hydraulic kits and line packages for powering attachments. If steep ground or rough terrain are issues, the PC360LC-10 Pipeline Arrangement can be equipped with single grouser shoes for increased traction and maneuverability, which is especially important when working on steep sections of pipeline right-of-way. Special under guards are available for the upper frame (Heavy Duty are 3.2 mm thick and Severe Duty are 9 mm thick) to protect engine and hydraulic components from potentially damaging debris rolling along the top of the tracks.

“Excavators are very flexible products for pipeline applications, and the PC360LC-10 Pipeline Arrangement is an especially good option,” said Moncini. “Its hydraulic systems are easily adaptable for a broad spectrum of attachment uses. For instance, aside from digging pipe trench, they can be used as pipe handlers in distribution and storage yards, to power bedding material screening buckets, run hydraulic hammers and many other applications requiring hydraulically-driven attachments.” ■

Brief Specs on the PC360LC-10 Pipeline Arrangement

Model	Horsepower	Operating Weight	Bucket Capacity
PC360LC-10 Pipeline Arr.	257 hp	78,255-79,930 lbs.	.89-2.56 cu. yds.

Komatsu's PC360LC-10 Pipeline Arrangement works well for holding heavy pipe sections during welding thanks to a standard anti-drift valve. An HKX anti-burst valve package is available and gives superior load-holding capabilities, including precision load control.

MAINTENANCE MILESTONE

Komatsu CARE hits 10,000th service interval; successful program increases longevity of machines

Milestones are often marked in big numbers. For Komatsu CARE, its latest big number is 10,000. This is meaningful because it represents the number of services performed since the program's launch in 2011, which came with the introduction of Tier 4 Interim machines.

Komatsu CARE provides complimentary scheduled maintenance for the first three years or 2,000 hours, whichever comes first, on Tier 4 Interim machines. It also includes up to two Komatsu Diesel Particulate Filter exchanges. Komatsu distributor technicians perform the services using genuine Komatsu OEM parts and fluids.

"We wanted to work with our distributors and customers to provide a solution to the new technology coming into the marketplace with the Tier 4 Interim machines," said Tony Rizzo, Deputy Director of Komatsu CARE Program Development and Operations. "We also wanted to help our customers reduce the owning and operating costs associated with maintenance. Komatsu CARE is a proactive approach designed to meet those needs. The program is a tremendous success, thanks in large part to the dedication of our distributors."

Both customer-owned and rented machines are covered under Komatsu CARE. Distributors track the machines with KOMTRAX to determine hours and machine location, and then work with customers to schedule service intervals at a convenient time and place.

The 10,000th service was an initial 250-hour interval performed on a WA470-7 wheel loader. Similar to many service intervals performed under the Komatsu CARE program, it was done on site by a Komatsu distributor field technician.

"There are a couple reasons for reaching 10,000 so fast," said Rizzo. "Having a tremendous number of Tier 4 Interim machines in the field is one. Another is that those machines are highly utilized, so there are a lot of hours put on them. Komatsu CARE assures that the services are done on time, which in turn may help increase the longevity and dependability of the machines." ■

Tony Rizzo, Deputy Director of Komatsu CARE Program Development and Operations

A Komatsu distributor technician performs the 10,000th service interval under the Komatsu CARE program. The program provides complimentary scheduled maintenance for the first three years or 2,000 hours, whichever comes first, on Komatsu Tier 4 Interim machines. It also includes up to two Komatsu Diesel Particulate Filter exchanges.

Komatsu, distributor and customer personnel celebrated the 10,000th service interval performed under the Komatsu CARE program.

BEYOND THE STANDARDS

Mike Ueno says innovative approaches help Komatsu meet and exceed emissions regulations

Mike Ueno,
Komatsu Executive Vice President
& Chief Technical Officer

This is one of a series of articles based on interviews with key people at Komatsu discussing the company's commitment to its customers in the construction and mining industries — and their visions for the future.

This year marks Mike Ueno's 30th with Komatsu, and during his tenure with the company he's held several positions. He started with the design of 15-liter engines and later helped develop 30-liter engines.

Ueno became Komatsu's Executive Vice President and Chief Technical Officer about three years ago, giving him overall technical responsibility for the company. That includes overseeing products at the Komatsu operations in Chattanooga, Tenn., where construction and forestry equipment is manufactured, as well as in Peoria, Ill., where Komatsu produces mining equipment.

He was also Vice President and President of Industrial Power Alliance, a joint venture between Komatsu and Cummins. Ueno was an executive officer for the Engine and Hydraulics Business Division at Komatsu, which involved plant management.

"Engine technology has evolved tremendously through the years," said Ueno. "I'm proud of the way we've implemented the tier emissions standards and made equipment that's more productive, reliable, durable and efficient at the same time. What's really gratifying is that many of the features that make those attributes possible came from listening to our customers and implementing their recommendations."

Mike and his wife celebrated their Silver Anniversary last year. The couple has three children.

QUESTION: Tier 4 Interim requirements finished at the end of last year. How would you assess Komatsu's implementation of the regulations?

ANSWER: I'd say very successfully. We met the requirements of reducing soot and NOx, and in some cases, exceeded them with an innovative approach that differentiated us from other manufacturers. For instance, to reduce soot we use a diesel particulate filter (DPF) to capture the particulate matter, and we burn it off with the aid of a variable-geometry turbocharger. This process promotes regeneration during production, and in most circumstances, the operator has to take no action. With other-brand machines, operators often have to take them out of production for a significant period of time. That lost productivity can be costly.

We have learned a lot about our DPF system from customers and from our field experience, as we strive for continuous product improvement. From this sense, I would like to express my sincere appreciation to all our distributors and others who promote our products.

QUESTION: How is Komatsu handling implementation of Tier 4 Final regulations, which begin this year?

ANSWER: The biggest challenge Tier 4 Final presents is a further decrease in NOx, taking emissions to near zero. To do that, we will use a selective catalytic reduction (SCR) and urea to regulate and virtually eliminate the amount of NOx emitted from construction equipment. Our SCR-fitted machine tests also show a decrease in fuel consumption. Komatsu's engineering and manufacturing personnel have been integrating the SCR into new models for quite some time, and as with previous regulations, we're ready for Tier 4 Final. We'll also be ready when it's time to implement Tier 4 Final on mining equipment, which begins in 2015.

Komatsu met emissions regulations with its Tier 4 Interim machines, and in many cases, increased production and fuel efficiency. Mike Ueno, Executive Vice President and Chief Technical Officer, says Tier 4 Final machines show further increases in fuel economy.

Another significant challenge with Tier 4 Final standards is the number of machines it affects. During the Interim phase, Komatsu introduced about 20 new machines. During Tier 4 Final, that number will be almost double. In fact, the next few years will involve re-engineering our entire fleet.

QUESTIONS: One new machine Komatsu recently introduced was its first *intelligent Machine Control* (iMC) dozer model, the D61i-23. Where does it fit in?

ANSWER: The D61i-23 is a Tier 4 Interim machine. It's also a perfect example of how Komatsu exceeded emissions requirements. The iMC dozers, with integrated GPS systems, provide automatic blade control that optimizes the amount of material moved from rough-cut to finish grading. All the operator has to do is control direction by moving the joystick control forward or backward, making even the most inexperienced operators more effective and productive. Feedback has been phenomenal, and customers are looking for more automated models.

QUESTION: Will Komatsu have more automated machines?

ANSWER: Most definitely, and relatively soon for some models. Komatsu plans to introduce additional *intelligent Machine Control* dozers, as well as iMC excavators. Other products could follow. And the future may hold further possibilities, such as autonomous machines requiring no operator. We've already had autonomous haul trucks for several years.

QUESTION: What else may be on the horizon?

ANSWER: From a machinery standpoint, another hybrid excavator. We introduced the

The *intelligent Machine Control* D61i-23 dozer provides automated blade control from rough-cut to finish grade, with integrated GPS technology. More automated products are on the horizon, according to Mike Ueno, Komatsu Executive Vice President and Chief Technical Officer.

Mike Ueno, Executive Vice President and Chief Technical Officer, says Komatsu is ready for Tier 4 Final regulations which begin this year. Engine technology in new machines aims to further reduce emissions, including virtually eliminating NOx.

first and are now in our second generation with the 20-ton-class HB215LC-1. A new, 30-ton model would be next.

Technology is always improving, and Komatsu will continue to implement it. One example is our KOMTRAX mobile app for smart devices. Since we introduced KOMTRAX, we've continued to add features and data that allow users to track hours, idle time, location, machine usage, modes and a whole host of other critical information. Tracking the SCR and urea level will be integrated with the Tier 4 Final machines. ■

A KITCHEN TABLE ISSUE

What we pay to fund transportation infrastructure lags far behind spending on other necessities

Many Americans have little idea about how much money they personally pay every month to maintain and improve the roads, bridges and public transit we use. But 75 to 80 percent of them say having safe, efficient and well-maintained transportation infrastructure is at least as, if not more, important to their personal livelihood and well-being than good cable, cell phone, internet, water, sewage, and household electricity and natural gas.

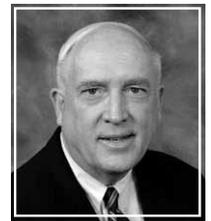

These were the key results in a national Ipsos Public Affairs survey that was recently commissioned by ARTBA as part of the “Transportation Makes America Work” campaign, which is aimed at gauging public sentiment about the role of transportation in daily life relative to other modern necessities we rely upon.

Among the other notable poll findings: 78 percent said driving a motor vehicle is “very” or “extremely” important to our ability to conduct our daily lives and 21 percent said the same about public transportation; 88 percent said transportation infrastructure is important to maintaining a strong U.S. economy; 74 percent agreed that “investing in transportation infrastructure should be a core function of the federal government.”

However, the survey did reveal one major disconnect between the perceived value of transportation mobility and an individual’s personal investment in the infrastructure that provides it. When asked how much their household pays each month in gas taxes (the primary means of financing highway and transit capital improvements), 40 percent of respondents said they “didn’t know.” In fact, according to FHWA data, the average household paid \$46 per month in gas taxes in 2011 – the most current year available.

U.S. Commerce Department 2011 data shows the average household spends about three-and-a-half times more each month for household electricity and natural gas service than we pay in state and federal gas taxes. We also pay three-and-a-half times as much monthly, on average, for landline and cell phone service, and nearly two-and-a-half times as much for cable and satellite television, radio and Internet access.

The bottom line is that this research helps bring the transportation investment conversation down to the kitchen table level, rather than talking about trillion dollar needs. If system beneficiaries – the public and businesses – invested in transportation infrastructure in line with what we routinely pay monthly for other necessary services, we would see reduced transportation costs for business, faster commutes, and safer, smarter, more durable roads, bridges and transit. ■

Pete Ruane,
ARTBA President
& CEO

Editor’s note: This is excerpted from an article by Pete Ruane, President & CEO of the American Road & Transportation Builders Association. To see the full article, visit ARTBA’s website, www.artba.org.

Most Americans say that transportation infrastructure is important to them but have little to no idea how much they pay in gas taxes that go toward funding roads, bridges and public transit, according to Pete Ruane, ARTBA President & CEO.

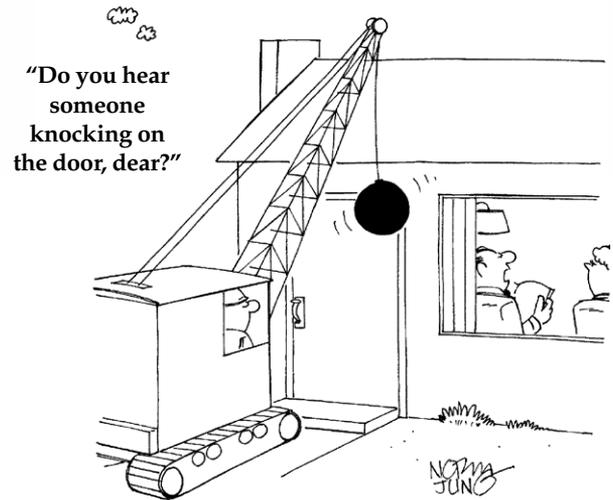

SIDE TRACKS

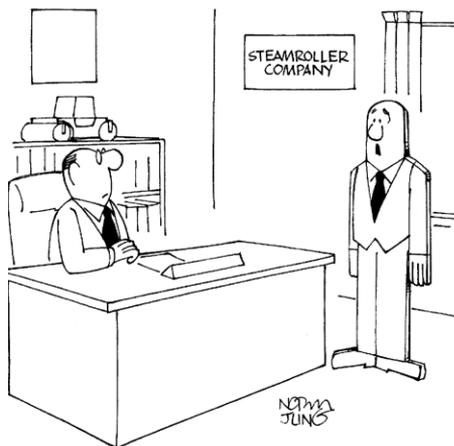

On the light side

"I like it. Build me two more."

"Do you hear someone knocking on the door, dear?"

"Mr. Woodhouse, I'd like to report an accident."

Did you know...

- A cow gives nearly 200,000 glasses of milk in her lifetime.
- Queen Elizabeth II served as a mechanic and driver in World War II.
- In 1537, England's King Henry VII officially declared February 14 the holiday of St. Valentine's Day.
- The human brain is more active during sleep than during the day.
- A honey bee must tap two million flowers to make one pound of honey.
- The average person drinks about 16,000 gallons of water in a lifetime.
- Chocolate was introduced into the United States in 1765 when cocoa beans were brought from the West Indies to Dorchester, Mass.
- Napoleon Bonaparte is the historical figure most often portrayed in movies. He has been featured in 194 movies, Jesus Christ in 152, and Abraham Lincoln in 137.
